An Evening Echo.

You are half way there when you know where you want to go.—ROBERT WHITAKER.

Food Waste.

The food consumed by New York City costs, at the railroad and steamer terminals, 350 millions of dollars a year; but when it gets to the consumers' kitchens, it costs 500 millions a year, says a writer in the current issue of the World's Work. The New York State Food Investigating Commission has made a study of the food supply of the largest city, and reaches this conclusion, among others.

The high cost of food in a large city is beyond doubt due in very large part to the chaotic and uneconomical system of handling which it undergoes. The New York commission, after careful investigation, charged this increase of forty-five percent in the cost of New York's food to waste and not to excessive profits. It proposes reformed methods of food distribution, which it believes would save the city at least sixty millions a year. Like reforms in other commercial centers would not doubt aid materially in helping to reduce the high cost of living.

Traveling Drawing Exhibit.

It will soon be possible for any city school to have a drawing exhibit of national significance practically without cost. Dr. Henry Turner Bailey and Mr. Royal B. Farnum are preparing for the United States Bureau of Education an exhibit of the best examples of drawing and art work in the elementary, high and normal schools of the United States, as well as one or two of the art schools. The exhibit is to be sent to any city desiring it upon payment of the cost of transportation from the city last using it. The transportation charges will be small. The exhibit is not to be a large one, but it is being selected with unusual care, so as to show the work that will be most suggestive to teachers, children and school officers. It will be ready for shipment about January 1. Cities desiring it should make application at once to the commissioner of education, Washington, D. C., in order that it may be dispatched to as many localities as possible with the least expense to each of them.

Dr. Claxton believes that this small but choice exhibit of drawing work, compiled by two acknowledged leaders of art teaching in America, will do much to aid the cause of drawing and art in the public schools.

Evolution of the Hospital.

The modern hospital is a sanitary work-shop. Until a few years ago, it was a place where sick people could be kept until they recovered. Today it is a work-shop where they are made well.

A few years ago the adequately equipped hospital was a clean house with clean floors, clean walls, a clean bed, indifferently trained nurses and a doctor whose sole means of diagnosis were his ear, his eye and his touch at the bedside of the patient. Today the modern hospital has a laboratory of pathology to aid the surgeon or physician in his diagnosis, a laboratory of bacteriology, a department of physical therapeutics for various sorts of exercise, a department of dietetics in which patients may be fed by the doctor's prescription and their food measured in exact terms; an operating department, aseptic, with all which that term implies; a milk laboratory for infant feeding, and a vast list of machinery such as blood pressure ap-

paratus for introducing artificial salines and other fluids into the blood, and so on down the list almost ad infinitum.

Yet this change is more one of degree than of kind. In 1863, Florence Nightingale published a book on the hospital of that day. Her plans, down to the minutest detail show the hospital unit almost precisely as it is today—the ward flanked by the service room, the bath, the toilet, the slop-sink room, the convalescents' dining room, the linen room, the surgical dressing room, the supply room and the medicine closets.

Today, says Dr. W. B. Russ, in a recent issue of the Journal of the American Medical Association, our units are the same, but our construction is steel and concrete; we have no carpets and dust catchers; our furniture is of white enamel. We have forsaken the old time heat registers with their dust and soot; we have steam radiators that give nothing into the sick room; we have screens on our windows to deny admission to the fly and the mosquito and other insects that carry the organism of disease. We know that sunlight is one of God's ways of curing disease and that fresh air is one of the greatest physicians in the world, so that we build our modern hospitals with windows facing to the sun, with air-space measured in terms of cubic feet for the sick.

The Luther Burbank Society.

The man who invents a new stitch for a sewing machine is entitled to a monopoly of the profits that can be made out of his invention. The patent laws of all countries protect him to the exclusion of all others. But the creator of new plants gets no protection from any country. If Luther Burbank had devoted his inventive genius toward the perfection of new machinery, as his early youth gave evidence that he might, he could be worth millions from his legally protected royalties. But, having chosen to become an inventor of new forms of plant life, he gets no permanent profit, no protection—is entitled, by law, to none.

The Burbank potato, which the United States Department of Agriculture authorities have said is adding annually seventeen and a half million dollars to the incomes of America, alone, brought Luther Burbank, its creator, only \$175. Other creations, through their sale to nurserymen and seedsmen, have enabled him to enjoy a comfortable living, but some of the most important of his creations, more important from a money standpoint than the Burbank potato, have brought, and will bring, him nothing.

Luther Burbank's mind is not a commercial mind. No man could put his hours, his enthusiasm and his almost infinite patience into any work which produced only money. Now with more than forty years of daily experiment behind him, Luther Burbank has retired from all business, retaining only his experimental grounds, and has freed himself from all cares in order that he may devote himself to giving the whole result of his life work to the world.

Through the aid of the Luther Burbank Society, an organization of some of America's foremost men and women, chartered by the state of California for this single purpose, the Burbank methods and discoveries will be disseminated to a world which has anxiously awaited and needed them. The society has no capital stock, no power to incur debts or earn profits. Its home is in the old Luther Burbank homestead at Santa Rosa. Its purpose is solely to assist Luther Burbank in the final preparation of his writings and to aid in the widespread dissemination of his teachings, so that the greatest number may profit to the greatest degree, to teach the thousands of Burbank lessons—as simple and as profitable as the early corn lesson—to a world which depends upon the soil for everything it has.

Truly, the public spirit which prompted the organization of the Luther Burbank Society deserves not merely national, but international recognition. These men and women who have joined together in this society to multiply and perpetuate Burbank's discoveries are doing a work which means better food and lower prices—not only in favored localities, but for all.

William C. Cook is here from Elkins.

A striking gown developed in raspberry colored voile. The trimming consists of embroidery worked in shades of red and blue. Tiny blue buttons trim the front of the skirt. The yoke of white chiffon is finished by a plastron of white lace. Belt of blue satin. The sleeves are edged by rills of white lace.

Of the Better Quality Reasonably Priced

We are showing the largest and most complete assortment of furs of the better qualities ever shown in our city. Of matched two-piece fur sets—Fur Coats also separate neck pieces and muffs—all the fashionable furs, including white fox, skunk, raccoon, lynx, Hudson and near seal, mink, martin and other popular furs.

MINK MORRIS COATS, \$115.00.
One must see these handsome Coats to appreciate their beauty—as the fur has a beautiful two-toned stripe effect that is simply rich and exquisite in appearance, full length models, collar and cuffs of fine Beaver, making a wonderfully handsome coat at the price, \$115. Other handsome models at \$125 to \$175.

BLACK PONY SKIN COATS, \$67.50.

Rich, handsome, full length Coats—collar and cuffs of Black, Coney, making a stylish coat—lined with heavy Silk Serge, with a heavy black satin kick to protect bottom of lining. Extra value at the price, \$67.50.

BLACK FRENCH CONEY COATS, \$75.00.

Exquisite model with large collar and cuffs of Martin Fur. Beautiful lining and kick at bottom—full length. Sale price \$95.00.

PONY SKIN COATS, \$110.00.

Trimmed in beautiful natural Raccoon, also Beautiful Near Seal Coats at the same price, \$110.00. These two models are handsome, full length Coats and are excellent values at the price.

Tailored Coats, \$15

We picture here to the left, one of the season's popular style garments. A full length Coat, tailored to perfection, and is indeed a wonderful value at the price—\$15.00.

The name four in one is derived from the four different ways the collar and revers can be adjusted—giving four distinctive style effects. This handsome Coat is made of elegant Boucle Cloth, diagonal effect in Black and White.

New Chinchilla Coats \$16.50

An elegant full length Coat made of excellent quality of Chinchilla. Buttons to side front—yoke effect, collar made of same material of contrasting shade. Colors Blue and Tan. The picture shown to the right shows the style and general outlines, though the garment has a stitched down or set on collar, instead of loose roll effect as is shown in cut. Has the appearance and is a splendid \$22.50 value. Price only \$16.50.

All Linen Waists "Max" Held" Make \$1.98

A new lot of fine tailored waists of pure linen. The famous "MaxHeld" make of which we have exclusive control for this city. These waists are made plain tailored style, soft, detachable collars, linen neckbands. A very fine grade of linen is used and the value is most excellent at \$1.98.
